EXPERIENCE

Plante Moran

Southfield, MI

Aug 2026 – Present

Copilot Enablement Specialist

- Manages end-to-end Microsoft 365 Copilot license administration, including intake, assignment, utilization tracking, and inventory monitoring to ensure accurate and efficient deployment across the firm
- Maintains Copilot content, prompt libraries, and self-service resources to drive user adoption and improve firmwide AI literacy
- Provides Tier 2 support for Copilot-related issues, document resolutions, and escalates complex cases to product or engineering teams as needed
- Supports sandbox provisioning, access management, onboarding, and logistics for Copilot Studio pilots and enterprise AI solutions
- Coordinates training sessions, office hours, and ambassador activities to strengthen community participation and support ongoing enablement
- Manages Copilot-related SharePoint content, ensuring accurate documentation, versioning, and accessibility for firmwide users
- Prepare, maintain, and refresh Power BI dashboards to deliver actionable insights on Copilot usage, adoption, and operational metrics
- Assist with governance processes, connector monitoring, compliance coordination, and operational documentation to maintain secure and scalable program operations

BorgWarner

Auburn Hills, MI

Jun 2025 – Aug 2026

IT Infrastructure Automation Intern

- Developed infrastructure-as-code for Azure using Terraform and Ansible, deploying backend infrastructure for the Micro Turbine Generator project that contributed to \$300M in company revenue
- Built and maintained cloud automation and CI/CD workflows using Terraform Cloud, Ansible, GitHub, and Azure, streamlining deployments and reducing infrastructure costs by 15%
- Implemented automated Azure and SQL Server VM backup solutions using Terraform, Recovery Services Vault, and Azure Blob Storage, improving data protection and reducing manual effort by 30%
- Configured Azure RBAC across multiple users and resource groups using least-privilege access principles, strengthening cloud security and access management
- Automated GitHub repository and Terraform Cloud workspace provisioning with PowerShell and OAuth tokens, reducing manual setup and improving development workflow efficiency
- Automated CMDB documentation workflows using Microsoft Copilot, Markdown templates, standardized prompts, and Microsoft Teams transcripts to generate one-page step guides, reducing documentation creation time by over 90%
- Developed reusable Terraform modules, component solutions, sample code, coding standards, and step-by-step documentation to standardize infrastructure development and knowledge sharing

EDUCATION

Georgia Institute of Technology

Atlanta, GA

Master of Science in Computer Science

Expected Graduation: May 2029

- Specialization in Artificial Intelligence

Lawrence Technological University

Southfield, MI

Bachelor of Science in Computer Science

Aug 2022 – May 2026

- Concentration in Software Engineering

PROJECTS

ROS Mobile Robot

- Developed a ROS mobile robot in C++ and Python, capable of autonomously tracking a blue line using computer vision, and integrated a LiDAR sensor that publishes data for real-time obstacle detection and avoidance in dynamic environments
- Conducted extensive field testing to validate mapping accuracy, path tracking stability, and obstacle response

Quantifying Construction Site Evolution Using AI

- Developed an automated framework to analyze construction progress using object detection, LLMs, and temporal image processing
- Processed construction images with Spectacular AI and Gemini 3 to extract objects and generate JSON/CSV datasets
- Built Python pipelines to quantify construction objects and visualize trends across project phases
- Generated LLM-based progress reports summarizing site evolution from foundation work to near-completion

TECHNICAL SKILLS

Programming Languages: Terraform, PowerShell, Python, Ansible, C++, Java, R, SQL

Developer Tools: Microsoft Azure, Terraform Cloud, Microsoft 365 Copilot, Copilot Studio, Purview, Power Platform, SharePoint, Red Hat Ansible, Power BI, Visual Studio Code, GitHub, Git, PostgreSQL, Ubuntu WSL, ROS Noetic, VMware

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900)
